AHNAF AHMAD SHOUMIK

SENIOR SOFTWARE ENGINEER · PHP / LARAVEL · E-COMMERCE PLATFORMS · PAYMENTS · LINUX & DEVOPS

Dhaka, Bangladesh · +880 1953-593181 · ahnafahmad2013@gmail.com · LinkedIn · GitHub · Portfolio

PROFESSIONAL SUMMARY

Senior Software Engineer with 5+ years building and operating production e-commerce and SaaS systems in PHP and Laravel. Deep specialisation in heavily customised OpenCart storefronts — custom modules, event-driven extensions, order and checkout workflows, and major-version migrations. Integrated payment and shipping gateways end to end, including webhook handling, idempotency, and reconciliation. Independently designed and shipped **storola.com**, a multi-tenant e-commerce SaaS platform, and manage the Linux infrastructure it runs on — provisioning, hardening, deployment, backups, and incident response. Also deliver production Flutter applications for local and international clients, spanning digital-signage kiosks, e-commerce, and consumer tracking apps. Use AI coding agents — Claude Code, Codex and Gemini — as a core part of the daily workflow, with working knowledge of the Model Context Protocol (MCP). Comfortable owning a system from requirement through production support without hand-offs.

CORE TECHNICAL SKILLS

Backend & Frameworks: PHP 7/8, Laravel, OpenCart 3 & 4, MVC, REST API design & consumption, Composer, Eloquent / raw SQL, queues, event & hook systems, authentication and authorisation

E-Commerce & Integrations: Custom OpenCart module & extension development, theme customisation, checkout and order workflows, payment gateway integration, shipping and logistics APIs, SMS / email / third-party service integration, multi-tenant architecture

Infrastructure, DevOps & Security: Linux server setup & administration, Nginx / Apache, PHP-FPM, SSL/TLS, Git, Bash scripting, cron & scheduled jobs, deployment workflows, server hardening, SSH & firewall configuration, backup & recovery, log analysis and production incident response

Databases: MySQL / MariaDB, schema design, indexing, query optimisation and troubleshooting, multi-schema and multi-tenant database management, migrations, data recovery

Frontend: JavaScript, jQuery, HTML5, CSS3, responsive layout (Flexbox / Grid), Bootstrap, Twig, AJAX

Mobile & Cross-Platform: Flutter / Dart, Firebase Cloud Messaging (push notifications), API-driven app architecture, offline / local storage, Android phone, tablet & TV deployment

AI-Assisted Development: Claude Code, OpenAI Codex, Google Gemini (daily use across coding, debugging, refactoring, code review and documentation), Model Context Protocol (MCP) — connecting AI agents to tools, APIs and data sources, prompt and context engineering for agentic workflows

Working Knowledge: Next.js / React, Firebase, SQLite

PROFESSIONAL EXPERIENCE

Senior Software Engineer | Innolytic IT Ltd

November 2020 – Present · Dhaka, Bangladesh

- Lead backend development across PHP/Laravel applications and OpenCart-based e-commerce platforms, owning features end to end from requirement clarification through deployment and production support.
- Built and maintained **heavily customised OpenCart 3 and OpenCart 4 storefronts** — custom modules, admin tools, event/hook-driven extensions, template overrides, and order-management workflows — including debugging third-party modules broken by OpenCart 4's stricter typing and architectural changes.
- Integrated **payment and shipping gateways** into client checkout flows, handling webhook verification, transaction state reconciliation, failure and retry paths, and order-status synchronisation with logistics providers.
- Administered and secured production Linux servers: environment provisioning, Nginx/Apache and PHP-FPM configuration, SSL certificates, permission and ownership models, cron scheduling, firewall and SSH hardening, backup routines, and log-driven incident diagnosis.
- Diagnosed and resolved complex production issues spanning application code, MySQL performance, dependency conflicts, environment configuration, and deployment — often on live client systems under time pressure.
- Executed large-scale database operations across multi-tenant MySQL environments, including bulk schema migrations across many client databases, query optimisation, and recovery of corrupted dump data.
- Scoped and estimated project work for enterprise clients, producing phased delivery plans and module-level effort and cost breakdowns for stakeholder approval.
- Contributed to cross-platform mobile development in Flutter, including a device-display control application with synchronised multi-device rendering and server-time coordination.
- Adopted AI-assisted engineering across the team's delivery work, using Claude Code, Codex and Gemini daily to speed up feature development, legacy-code analysis, debugging and test writing, while keeping every change under manual review before it reaches production.

Independent Software Developer | **Freelance — Fiverr / Freelancer.com**
Project-based · Remote

- Delivered custom web development, e-commerce customisation, and troubleshooting work for international clients, managing requirements, delivery, and post-launch support independently.
- Handled direct client communication, scoping, and revision cycles across projects with varying technical maturity and legacy constraints.

KEY PROJECTS

Storola | **storola.com — Multi-Tenant E-Commerce SaaS Platform**
Full Stack · Architecture, development, infrastructure

- Designed and built a SaaS platform enabling clients to launch and operate their own online stores, covering tenant provisioning, isolated data management, store configuration, and subscription-based access.
- Architected the multi-tenant data model and provisioning pipeline, including automated store setup and schema management across tenant databases.
- Own the full production stack — server configuration, deployment process, SSL, backups, monitoring, and security hardening — as the sole engineer on the platform.

Client E-Commerce Platforms | **OpenCart 3 / 4 — Custom Builds & Migrations**

- Delivered customised storefronts for multiple retail clients: bespoke modules, payment and shipping integrations, responsive theme work, admin reporting tools, and performance and stability fixes on legacy codebases.

SmartExam BD | **Laravel — Online Examination & EdTech Platform**
Backend / Full Stack · Laravel, MySQL, JavaScript, Zoom API

- Built an online examination platform aligned to the Bangladesh national curriculum, supporting both MCQ and written exams across multiple classes, with automated MCQ scoring and teacher-led evaluation of written scripts.
- Implemented a browser-based script annotation tool allowing teachers to draw, mark, and annotate directly on submitted written answer sheets before publishing results.
- Delivered student self-assessment with performance-based suggestions, class and exam leaderboards, and automated notification and messaging flows around exam schedules and result publication.
- Integrated the Zoom API to launch and manage live online classes from within the platform, tied to batches, schedules, and enrolled students.

Mohammad Parcel | **Laravel — Courier & Parcel Delivery Management System**
Backend / Full Stack · Laravel, MySQL, REST APIs, SMS notifications

- Delivered a complete parcel operations platform for a client launching a courier business, covering pickup, transit, hub handling, delivery, return, and partial-delivery workflows.
- Built multi-role access for merchants, delivery personnel, and administrators, including merchant account balances, COD collection, and payout handling.
- Implemented operational and financial reporting dashboards plus status-driven SMS and in-app notifications across the full parcel lifecycle.

DeshTax | **Laravel — Online Tax Return Preparation Platform**
Backend / Full Stack · Laravel, MySQL, PDF generation

- Built a guided tax filing application where users supply income, asset, and expense details for a selected tax year and generate a complete, submission-ready tax file.
- Implemented year-wise tax rule handling, slab and exemption calculation, input validation, and automated generation of the required tax documents and reports.

SMART BRICM | **Laravel — High-Concurrency Online Olympiad Platform**

- Engineered exam delivery for nationwide online olympiads serving 10,000+ concurrent participants, tuning query and caching strategy, queue-based background processing, and server configuration to keep the platform stable and responsive under peak load.

DisplayLab | **Flutter — Digital Signage & Kiosk Platform (US client)**
Mobile / Cross-Platform · Flutter, Firebase Cloud Messaging, Android TV

- Built an Android phone, tablet, and TV kiosk application with a custom playlist slider rendering images, video, and embedded web pages in sequence.
- Implemented device pairing through on-screen codes, letting operators register many devices and assign or schedule multiple playlists across them remotely.
- Used Firebase Cloud Messaging for real-time playlist updates, on-the-fly notifications, and remote commands to devices already in the field.

- Added screen rotation and resize controls, auto-start on device boot for unattended kiosk operation, and subscription-based access control.

Flatshop | **Flutter — Multi-Platform E-Commerce Mobile App**
Mobile / Cross-Platform · Flutter, REST API integration

- Built a mobile storefront that connects to Storola stores and automatically syncs catalogue, pricing, and order data, delivering a full native shopping experience.
- Designed and implemented the API integration layer that lets the same app connect to Magento, PrestaShop, and Bagisto stores, normalising differing platform APIs behind a single client interface.

Nutriora | **Flutter — Nutrition & Calorie Tracking App**
Mobile / Cross-Platform · Flutter, local storage

- Built a calorie and nutrition tracking app with a saved food library, daily intake logging, per-meal nutrient breakdown, and suggestions based on the user's consumption patterns.

Earlier academic and personal work: FoodHunterBD (food-sharing web platform, PHP/Laravel), Bechakena.com (thesis e-commerce project, PHP/MySQL), Travel Assistance Android app (Java, SQLite, Google Maps API), Blog Android app (Java, Firebase), and an Arduino-based home automation prototype.

EDUCATION

Master of Science in Computer Science | **Jahangirnagar University**
Department of Computer Science & Engineering · 2020

Bachelor of Science in Computer Science & Engineering | **Ahsanullah University of Science and Technology**
2018

ACHIEVEMENTS

- 1st Runner-up — Intra-University Programming Contest, Ahsanullah University of Science and Technology (2016)
- Best Project Award — Space Shooter Game, Ahsanullah University of Science and Technology (2015)
- Semifinalist — Banglalink Idea Incubator, Urban Agro startup concept (2019)
